# Teaching Mathematics to Promote Children's Thinking 

Seán Delaney<br>Marino Institute of Education

24 April 2012

## Introduction 1

- Who teaches senior classes ( $3^{\text {rd }}$ to $6^{\text {th }}$ )?
- Who teaches junior classes (J.I. To $2^{\text {nd }}$ )?
- Who teaches learning support?
- Who teaches in a special school or class?
- Who is a teaching principal?
- Who is a mostly administrative principal?

## Introduction 2

- What would you like to work on?
- What I say won't apply exactly to your classroom situation
- You won't be leaving here with resources that you can use in class tomorrow!
- Share some ideas and experiences about teaching maths

## Patterns of maths lessons

## A

Review homework or remind children of accomplishments so far

Present the topic and problems for the day

Students or teachers develop procedures to solve the problem(s) at the board, taking suggestions from other students and the teacher

Practise doing problems similar to those worked on above

B
Review the previous lesson with a brief teacher lecture or summary by students

Present the problem for the day. One problem only.

Students work individually on problems first and then in groups for 5-10 minutes

Students (selected by teacher) present and discuss one or more solution methods.

Highlight and summarise major points JAPAN
www.seandelaney.com

Review previous material: Check homework or engage in warm-up activity

Demonstrate how to solve problems for the day by presenting a few sample problems and demonstrating how to solve them

Practise problems similar to those for which solutions were demonstrated

Correct class work and assign homework UNITED STATES

## "Teaching is a Cultural Activity"

"Some people think that teaching is an innate skill, something you're born with. Others think that teachers learn to teach by enrolling in college teacher-training programmes. Neither is the best description. Teaching, like other cultural activities is learning through informal participation over long periods of time. It is something one learns to do more by growing up in a culture than by studying it formally."
"If you always do what you've always done, you'll always get what you've always got."

If what you're doing isn't working, try something new.

## Mathematical Knowledge for Teaching

$$
\begin{array}{r}
35 \\
\times 25 \\
\hline 875
\end{array}
$$

## How Did this Student Get this Answer?

35

## $\times 25$

255

## $+800$

> Example from Deborah Ball

1055

## Clip 1: Mathematics Question

How much would $1 / 4 \mathrm{~kg}$ of mushrooms cost if the price was $€ 0.62$ per 100g?

## Clip 2: Define an Odd Number

## Piaget's Theory of Mathematical Knowledge

- Physical knowledge
- Social Conventional Knowledge
- Logico-Mathematical Knowledge

## Physical Knowledge

## Social Conventional Knowledge

## Logico-Mathematical Knowledge

http://www.youtube.com/watch?v=HEUgHIco w

## The key to improving mathematics teaching is...

WE
RECYCLE 8

BUT...
...getting children to think and talk mathematically

## Asking questions such as...

HOW DID YOU GET THAT?
Could it be done another way?

EXPLAIN
$\because O D$
Put into your own words
$D_{\mathbf{e}_{\mathbf{c}_{\mathbf{r l b}_{\mathbf{i}}}}}$
Tell me about...
How does that connect with...?

MARIN NO

## Asking questions such as...

How can you be
sure?

## Help Children Develop their Mathematical Language

- Factor
- Odd
- Share
- Difference
- Product
- Sum
- Prime
- Face
- Improper ...

## And Children can Write about Maths

## Prompts

- Write down everything you know about...
- Write down what you learned in class today
- Write down one question you still have about...
- After our discussion, write down what you think...
- What would you say to some who thinks that ...?
- Write down what you would like to learn about in maths next week

Some Samples of Children's Writing about Maths

I banned what xanguent memes this week.
 about runaideus

I wound like to learn about time
I learnod about sliving broblings.

Why would one person get an answer of $1 \frac{1}{2}$ and another get $6 / 4$ to the same problem?
$\frac{6}{4}=1 \frac{2}{4}=1 \frac{1}{2}$ because $9 \frac{4}{4}$ is the
same as 1 so $\frac{6}{4}=1 \frac{1}{2}$ out $\frac{2}{4}$

Why would one person get an answer of $1 \frac{1}{2}$ and another get $6 / 4$ to the same problem?

Why would one person get an answer of $1 \frac{1}{2}$ and another get $6 / 4$ to the same problem?
$\frac{b / 4}{4}=1 \frac{1}{2}=1 \frac{2}{4}$ There all the beccous - ${ }^{2} \frac{3}{4}$ is the same as at half. And $\frac{b}{4}$ is $\frac{2}{4}$ more than ar whale unit. 4

Why would one person get an answer of $1 \frac{1}{2}$ and another get $6 / 4$ to the same problem?
$\frac{6}{4}$ and $\frac{2}{4}$ are the same because they is ne ditfrence its gust haw you write it

## Common misconceptions/errors in maths 1

- $46-28=22$
- $50 \%>4 / 5$
- $8.35>8.5$
- 20 minutes less than an hour is 80 minutes

## Common misconceptions/errors in maths 2

$1 / 3$ is shaded

9 minutes to 1

# Common misconceptions/errors in maths 3 

Parcel $B$ is heavier than parcel $A$

## Principles

- Making errors is a natural part of learning mathematics
- Errors provide insights into children's understanding of mathematical ideas
- If errors are not made visible, a teacher cannot address them
- Children don't get "confused" by talking about mistakes

## Strategies for Responding to Errors

- Encourage language of agreeing and disagreeing with ideas rather than saying that someone is right or wrong
- Thank children for bringing up something that is potentially confusing for others
- If children don't raise potential errors, refer to another class you taught where some children thought that.... Ask: Why might someone think that ....
- Follow up by discussing "how can we help the children in this class to remember that...?"

## Worked Example in a Textbook from <br> Cyprus

Constantinos's father bought $\mathbf{3}$ pizzas for his son's birthday party. The kids ate $1 \frac{1}{3}$ pizzas. How many pizzas were left?

Color the pizza that was eaten.

There were $2 \frac{1}{4}$ apple pies in the pan. The kids ate $1 \frac{3}{4}$ apple pies.
How many apple pies were left?
Color the part that kids ate.

## Worked Example in a Textbook from

## Taiwan

How many fewer meters of colorful belts did Gi-Wen use compared to Wen-Ting? Write the corresponding mathematical expression and then find the answer.

## Worked Examples in 2 Textbooks from Ireland

$$
\begin{aligned}
& \text { Example 2: } 4 \frac{1}{6}-2 \frac{3}{4} \\
& \frac{1}{6}=\frac{2}{12} \\
& \frac{3}{4}=\frac{6}{8}=\frac{9}{12} \\
& 4 \frac{1}{6}=4 \frac{2}{12}=3 \frac{14}{12} \quad \text { (by renaming) } \\
&-2 \frac{3}{4}=-2 \frac{9}{12}=-\frac{2 \frac{9}{12}}{1 \frac{5}{12}}
\end{aligned}
$$

From $3 \frac{1}{5}$ take away $1 \frac{3}{10}$.

Subtract

$$
\begin{array}{|cc}
3 \frac{1}{5} \\
-1 \frac{3}{10} \\
?
\end{array} \frac{\begin{array}{r}
3 \frac{2}{10} \\
?
\end{array}}{\frac{-1 \frac{3}{10}}{?}} \Rightarrow \begin{array}{r}
2 \frac{12}{10} \\
\frac{-1 \frac{3}{10}}{1 \frac{9}{10}}
\end{array}
$$

## Algorithms for

- Addition
- Subtraction
- Multiplication
- Division

## Problem Solving Strategy 1

## RUDE

- Read the problem
- Underline the key words
- Draw a diagram of the problem
- Estimate your answer and then solve the problem

## Problem Solving Strategy 2

## STAR

- Search the word problem (info)
- Translate the words into an equation or picture (plan)
- Answer the problem (solve)
- Review the solution (check)

## Problem Solving Strategy 3

## LUV2C

- Look
- Underline
- Visualise
- Choose Numbers
- Calculate

## Problem Solving in Maths

- Little evidence that such strategies work
- Some evidence that classifying problems into problem-types can be helpful for children with learning disabilities
- Best way to learn problem solving is to practise solving problems
- Skill in problem solving develops slowly over time
- Many textbooks have too many problems, and many of the problems are of poor quality

## A Good Problem

- Should leave the solver feeling "stuck" at first
- The maths is what makes the problem problematic
- Relates to the children's experience
- Connects different maths topics
- Allows children with different attainment levels to achieve success with it
- May take time, even days, to complete
- Requires children to justify and explain their answers and methods

## Sample Problem

- I have 10-cent, 5 -cent and 1-cent coins in my money box. If I open the box and take out three coins, how much money could I have? How can you be sure that you have found all the possible amounts?

## Other Sample Problems

Donal has 6 jelly tots, Diana has 2 and Enda has 4 . They want to share them equally. How will they do it? Draw a picture to help explain your answer.

If you did not know the answer to $12-7$, what are some ways you could find the answer?

Explain two different ways to multiply $4 \times 276$ in your head. Which way is easier to use? Would you use a different way to multiply $5 \times 98$ ? Explain why you would use the same or different methods.

Source: Van de Walle

## Solve this problem

Dublin Zoo has just received two new sheep for the Family Farm part of the zoo. The zoo keeper wants to build an enclosure for the sheep. She decides that the enclosure must be square or rectangular with an area of 100 square metres.

- Which different configurations could she build?
- How many metres of fencing will she need for each possible design?
- Use your copy or some graph paper to draw all the possible rectangular or square designs.
- Include a key to tell how much each unit on the grid paper equals.
- Which configuration would you recommend that the zoo keeper builds? Why?

I would pict $10 \times 10$ because it has lot of *room if you

- put more sheep in!

I wo u Ld recomend
$10 \times 10$ because it is the most ever one.

10 mxlom or $12.5 \mathrm{~m} \times 8 \mathrm{~m}$. The perimeter of the first one is 40 m closely followed by the second on (5) 41 m . Because these are so short the are less expensive to fence. They also que lots of irdth for the animals.

## Sources of Good Problems??

- http://nrich.maths.org/public/
- http://www.nctm.org/

Here was a site that one of you suggested.

- http://nzmaths.co.nz/

## Revoicing

- Can you repeat what ........ said?
- Can you put what ......... said in your own words?

Use it to

- Amplify important points
- Check that children are listening
- Clarify what a child is thinking/saying

## Aquatics

## SMinn cine calcuiations

- What is the length of our local swimming pool?
- If I swam the following number of lengths, how far would I have swum?

1 length
2 lengths

## Multiplying

3 lengths
10 lengths
50 lengths
$1 / 2$ length
Say how you figured out each one.

The numbers you choose here allow you to differentiate among learners in the class. Some children will do them all and more complicated ones. Others will just do some of these. Try to help each child do better than they think they can do.
-If the pool is 25 metres long, how many lengths would I have to swim in order to swim 50 metres
Dividing $\quad 100$ metres?

250 metres?
500 metres?
a kilometre?
5 metres?
Say how you figured out each one.

Sort this PE Equipment

## Could be sorted by

## Criteria

- Colour
- Type
- Material
- Shape
- Use
- Property
(Categories)
(yellow, blue, two-colour etc.)
(cone, bat, ball etc.)
(wood, plastic, leather etc.)
(sphere, non-sphere; round, not round etc.)
(throwing and catching, hitting, marking etc.)
(can roll, can stack, can slide etc.)

## Principles when setting a sorting task

- Sorting one set of objects in multiple ways is better than sorting multiple sets of objects in one way each
- Children must choose the criteria and categories for sorting
- It's good if there are some ambiguous categories that require discussion

## Figure out the score in points in each of the following GAA matches

Who won each match?
By how much did they win?

This activity introduces children to calculations of the form $(a \times 3)+(b \times 1)=c$ in $a$ concrete way. This is important for understanding place value and multiplication of 2digit numbers.

## Clarifying link to place value and multiplying

| Goals | Points | Score in Points |
| :--- | :--- | :--- |
| 2 | 7 | $(2 \times 3)+(7 \times 1)=13$ |
|  |  |  |

| Tens | Units | Value of Number |
| :--- | :--- | :--- |
| 3 | 6 | $(3 \times 10)+(6 \times 1)=36$ |

[^0]
## GAA score problem

If your team's score in a camogie match was 23 points, what could the score have been in goals and points? Allows for differentiation

Have you found all the possible solutions?

## Some possible solutions to GAA score problem

0-23
1-20
2-17
3-14
4-11
5-8
6-5
7-2
Could there be other possible scores? Justify your answer.
Could the team have scored exactly 18 points and some goals? Why? Why not?
Do you notice any pattern in the solutions?
Could be applied to rugby (try, conversion, penalty)

## Number Facts/Tables

## Take a Minute or Two to Memorise these Addresses and Work Places

Charlie David lives on George Avenue
Charlie George lives on Albert Zoe Avenue
George Ernie lives on Albert Bruno Avenue

Charlie David works on Albert Bruno Avenue Charlie George works on Bruno Albert Avenue George Ernie works on Charlie Ernie Avenue

From Dehaene (1997) The Number Sense (p. 127)

## The Sentences are Roughly Equivalent to:

- $3+4=7$
- $3+7=10$
- $7+5=12$
- $3 \times 4=12$
- $3 \times 7=21$
- $7 \times 5=35$

Charlie David lives on George Avenue

Charlie George lives on Albert Zoe Avenue
George Ernie lives on Albert Bruno Avenue

Charlie David works on Albert Bruno Avenue

Charlie George works on Bruno Albert Avenue
George Ernie works on Charlie Ernie Avenue

# Addition and Multiplication Number Facts 

Start with a blank 12x12 grid

|  |  |  |  |  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |

Show the children how the addition square works by giving some examples e.g. 1+

| $\mathbf{+}$ | $\mathbf{0}$ | $\mathbf{1}$ | $\mathbf{2}$ | $\mathbf{3}$ | $\mathbf{4}$ | 5 | $\mathbf{6}$ | $\mathbf{7}$ | $\mathbf{8}$ | $\mathbf{9}$ | $\mathbf{1 0}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathbf{0}$ |  | 1 |  |  |  |  |  |  |  |  |  |
| $\mathbf{1}$ |  | 2 |  |  |  |  |  |  |  |  |  |
| $\mathbf{2}$ |  | 3 |  |  |  |  |  |  |  |  |  |
| $\mathbf{3}$ |  | 4 |  |  |  |  |  |  |  |  |  |
| $\mathbf{4}$ |  | 5 |  |  |  |  |  |  |  |  |  |
| $\mathbf{5}$ |  | 6 |  |  |  |  |  |  |  |  |  |
| $\mathbf{6}$ |  | 7 |  |  |  |  |  |  |  |  |  |
| $\mathbf{7}$ |  | 8 |  |  |  |  |  |  |  |  |  |
| $\mathbf{8}$ |  | 9 |  |  |  |  |  |  |  |  |  |
| $\mathbf{9}$ |  | 10 |  |  |  |  |  |  |  |  |  |
| $\mathbf{1 0}$ |  | 11 |  |  |  |  |  |  |  |  |  |

Or 6+

| $\mathbf{+}$ | $\mathbf{0}$ | $\mathbf{1}$ | $\mathbf{2}$ | $\mathbf{3}$ | $\mathbf{4}$ | $\mathbf{5}$ | $\mathbf{6}$ | $\mathbf{7}$ | $\mathbf{8}$ | $\mathbf{9}$ | $\mathbf{1 0}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathbf{0}$ |  |  |  |  |  |  | 6 |  |  |  |  |
| $\mathbf{1}$ |  |  |  |  |  |  | 7 |  |  |  |  |
| $\mathbf{2}$ |  |  |  |  |  |  | 8 |  |  |  |  |
| $\mathbf{3}$ |  |  |  |  |  |  | 9 |  |  |  |  |
| $\mathbf{4}$ |  |  |  |  |  |  | 10 |  |  |  |  |
| $\mathbf{5}$ |  |  |  |  |  |  | 11 |  |  |  |  |
| $\mathbf{6}$ |  |  |  |  |  |  | 12 |  |  |  |  |
| $\mathbf{7}$ |  |  |  |  |  |  | 13 |  |  |  |  |
